BASICS OF BIOLOGY

Self standing on-line Course
based on virtual laboratory simulations

Apply now!

Duration: Around 16h to be completed in 6 weeks

Start date: 1st April 2023

End Date: 10th May 2023

Maximum n° students: 20

Description of the course

This course is aimed at providing concepts in basic Biology to medical doctors, informaticians, mathematicians, physicists, engineers and anyone in need.

How does it work?

This course is based on virtual laboratory simulations offered by Labster. Simulations consist of an interactive lab activity in which you learn and apply your understanding of important topics in Biology within the context of a virtual lab. You will work through real-life cases stories and interact with lab equipment.

You will have to make decisions and answer quiz questions to help you to link your understanding of theory to the lab activity you are performing.

Although virtual labs can never replicate real-world lab life, we hope this virtual experience will help you to get closer to the fascinating world of scientific research. Enjoy!
